

Language + Admin point

Language Task

Job Title

- Thai language separation

Job Description

- Using the provided Thai - English string doc we will establish the working of app + web for the Thailand operations

NOTE : Thai- English string document file will be provided by client

Admin Task

Job Title

- Domain segregation based on roles

Job Description

- The Air traveler & the users will use the old domain (current); while all the other user roles will have to use the new domain to access further. We will work on this segregation task so as to ensure different users have different access accordingly.

Client message:

recap, actually I thought the domain access would be a very simple task. For the Air Traveller and customer, they log in using airdely.com. For the Admin, they log in using tdr111257.com to the Backend Control Web.

For the Thai language conversion, please also ensure that the generated pdf for the AWB and Receipt are also changed accordingly to the Thai language too.

the input for the user will also be in Thai language accordingly. Hence the keyboard selection or activation must be integrated.
